RESPIMATIC 100
(Patent Pending)

Is it right for you?

- *Need adult, non-invasive respiratory support?*
- *Support from Initiation to Weaning?*
- *No compressed air or piped Oxygen?*
- *Connect to O_2 Cylinder or Concentrator?*
- *Full range of Respiration parameters?*
- *Breath Synchronization for Patient Comfort?*
- *Remote monitoring capability?*
- *Handle harsh-uncontrolled Environment?*
- *Easy-to-use System?*
- *Budget Friendly?*

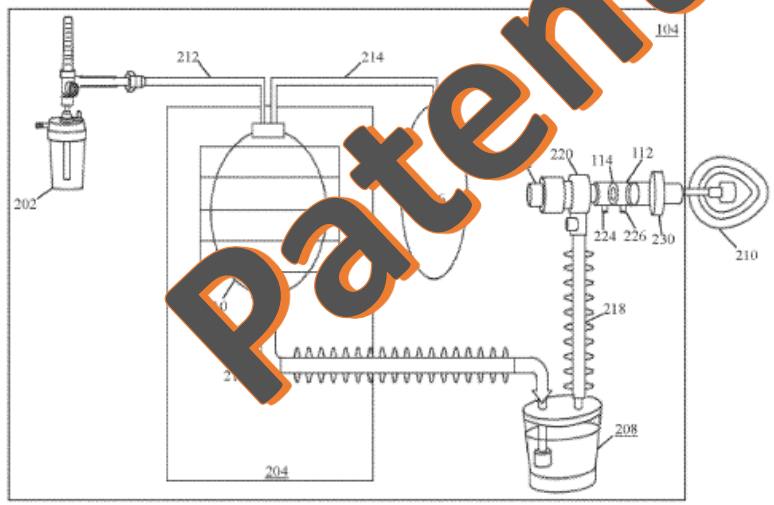
(57) **ABSTRACT**

Provided is a ventilator that includes a breathing system, a mechanical system coupled to breathing system, and a control system coupled to breathing system and mechanical system. The control system includes pressure sensors, processing circuitry, and memory configured to store a look-up table. The processing circuitry receives a set of values for plurality of parameters, identifies a compression value from a plurality of compression values in the look-up table based on the received set of values. The processing circuitry causes the mechanical system to compress a bag valve of the breathing system in accordance with the identifi... sion value. The compression of the bag ... gaseous inhalant to flow through the breathi... em wit... a time-interval. The processing circuitry ... actual volume of the gaseous inhalant and itera... fies the compression value of the bag valve to ... desired volume of the gaseous inhalant.



$$Q \propto \sqrt{\frac{(P_{G1}-P_{G2})}{(P_{G1}+P_{G2})+2*Patmosphere}}$$

An important and necess... simplifi... is t... and P_{G2} encountered in our system are of the order of tens of cmH_2O wh... ...mosp... is of ... order of a thousand cmH_2O of pressure. At sea level, *Patmosphere* is a... ...1000 ...O. Even at an altitude of 15,000 feet, *Patmosphere* is appro... ...ely 60... . On the other hand, the P_{G1} and P_{G2} in the system range from 1... ...60...

...(P_{G1} ...) term is negligible compared to (2* *Patmosphere*) , even more so since it ... ...ed by a square root. The flow equation can be simplified to the one below.

$$Q \propto \sqrt{\frac{(P_{G1}-P_{G2})}{Patmosphere}}$$

Recalling *Equation 2* from the theory section above, this equation can be recast as below given that the orifice characteristics and pressure tap locations are the same for every system.

$$Q = C * \frac{\sqrt{(P_{G1}-P_{G2})}}{\sqrt{(Patmosphere)}} \quad \text{where } C = f(Re) \text{ Reynold's number}$$

At a given geographical location, *Patmosphere* is also a constant. So, the above equation further reduces to the one below.

$$Q = \left(\frac{C}{\sqrt{Patmoshpere}}\right) * \sqrt{(P_{G1}-P_{G2})}$$

The equation needs further simplification to ease the computation burden of the square root computation for and inexpensive micro-controller. The constraints are as below.

Our Solution RESPIMATIC 100

- 4 Commonly Used Ventilation Modes
  CMV, ACV, SIMV, PSV
- Respiration Rate, Tidal Volume, PEEP, Pressure Support & FiO2 Controls
- Volume Controlled and Pressure Supported Breaths
- Mandatory & Spontaneous Breaths with Full Breath Synchronization

Complete set of WEB Apps
- Remote Dashboard
- Remote Recorder
- Remote Analyzer
- FiO_2 Calculator

Low-speed Wi-Fi sufficient
Phone Hot-spot sufficient

Uses secure HTTPS protocol

Field upgradable with new Firmware releases

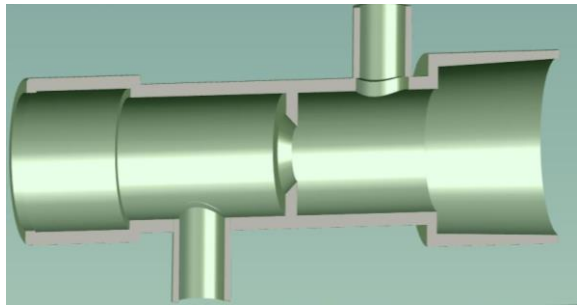
Respimatic 100
Under the hood

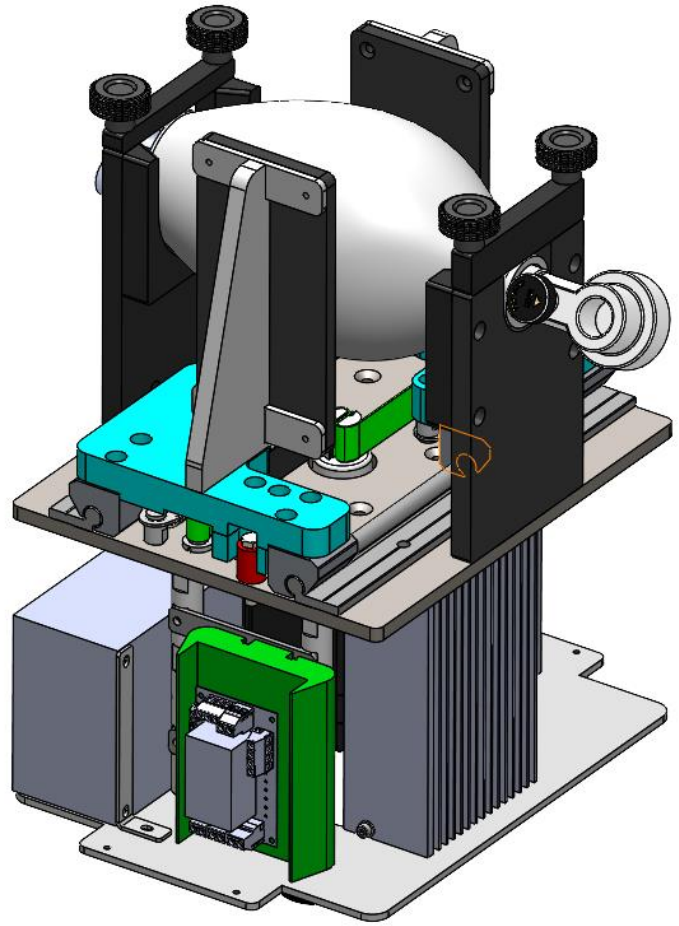
Low Production Cost

Compact and Robust

Intuitive HMI

Simple to operate





Simple Electronics COTS components

Rugged mechanical system

Complete Parameter monitoring

Complete set of alarm conditions

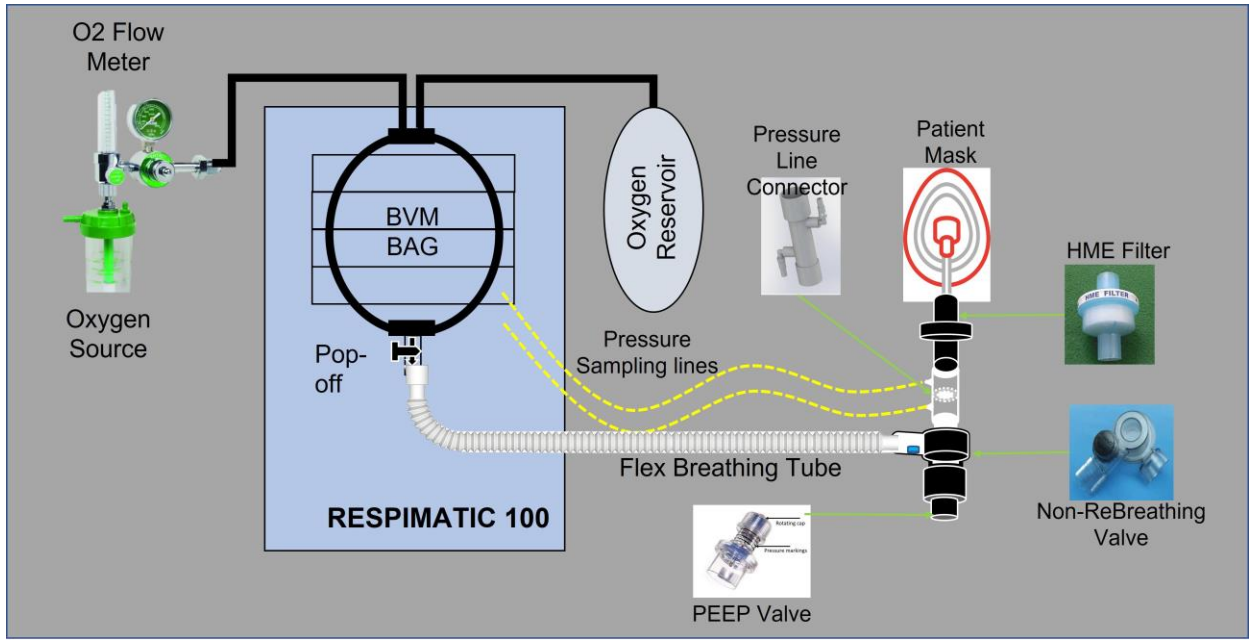
Robust, Suitable for mass production

Breathing Circuit

- Proprietary, *patent-pending* Pressure line connector with Orifice plate
- COTS single-limb Breathing Circuit with NRBM
- BVM or Ambu Bag with Reservoir
- Pressure sensors, PEEP valve
- HME Filter
- Humidifier
- Oxygen Source

Off-the-Shelf Single limbed Circuit with NRBM

Proprietary Dual Pressure line Connector



Front Panel
The Human-Machine Interface

Simple Tactile buttons
No delicate touch screen etc.

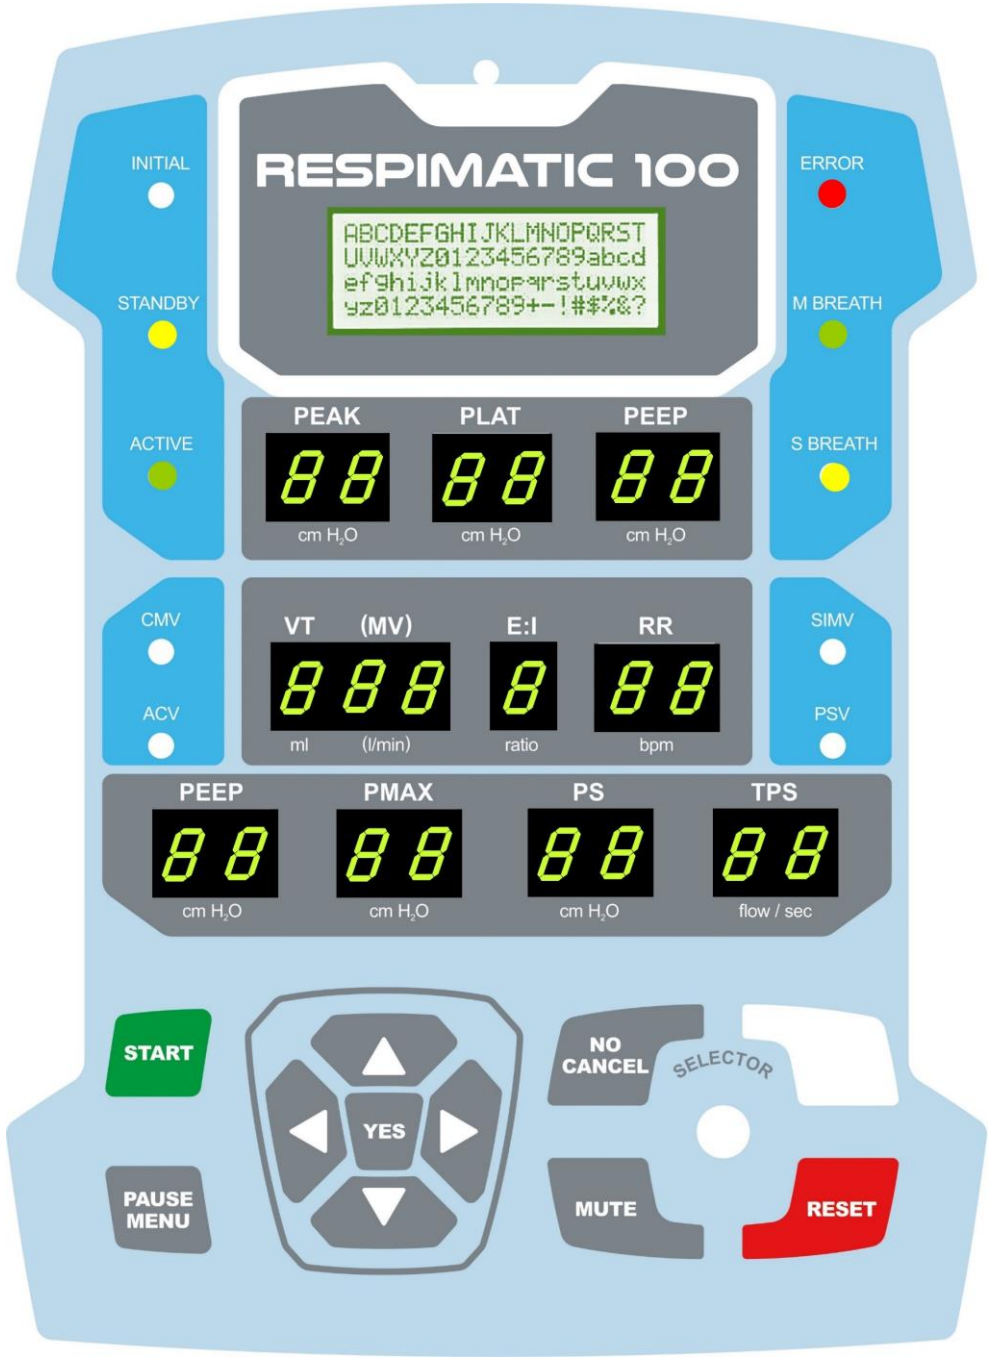
Easy to read 7-seg LED Parameters Display

Parameter selection using simple arrow buttons

4-line LCD Display for displaying Messages and Menus

Peak, Plateau, PEEP pressures displayed after each breath

Shows Delivered Volumes, Lung Compliances, Breath types etc.



Dashboard Snapshot View

Anyone, anywhere in the world can monitor any patient via the WEB

- Must know the UID of the system

One-to-many and many-to-one

5 Dashboard views

- Snapshots
- Charts
- Statistics
- Breath Shapes
- Alerts

Range Selector on every view to display data for different breath number ranges

- For instance, use to compare the statistics for the first hour of ventilation against the second hour.

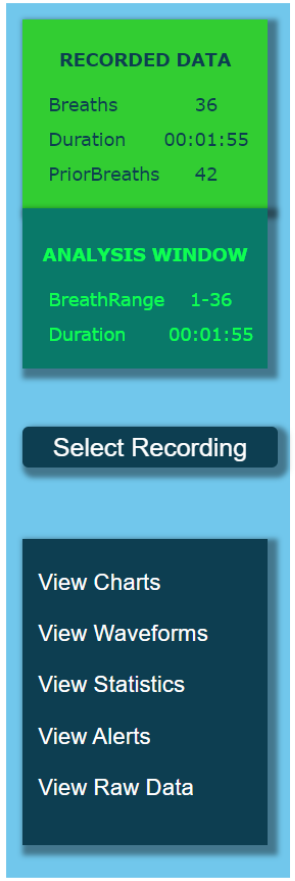
Analyzer

Any patient Session can be recorded locally or remotely.

The recorded Session can then be analyzed off-line using the Analyzer.



Updating Firmware

Firmware releases available on the WEB.

Step-by-step menu driven update procedure

Ventilation Modes

The 4 most frequently used

Continuous Mandatory Ventilation (CMV)	***Synchronized Assist Control Ventilation (Sync ACV)***	***Synchronized Intermittent Mandatory Ventilation (SIMV)***	***Pressure Support Ventilation (PSV)***
Volume Controlled Mandatory Breaths	Volume Controlled Mandatory Breaths	Volume Controlled Mandatory Breaths	Pressure supported breaths in response to spontaneous breaths
Ignore spontaneous breaths	Volume controlled breaths in response to spontaneous breaths	Pressure supported breaths in response to spontaneous breaths	Monitoring of Minute Volume
	Breath Synchronization	Breath Synchronization	Fallback to SIMV if insufficient Minute volume

Volume Controlled Breaths
(All modes)

Tidal Volume (ml)

200 to 600 ml
increments of 50 ml

Respiratory Rate (bpm)

10 to 30 bpm
increments of 1 bpm

Inspiration/Expiration Ratio (I:E)

1:1 1:2 1:3

PEEP (cmH_2O)

4 to 15 cmH_2O
increments of 1 cmH_2O

Max Pressure (cmH_2O)

20 to 50 cmH_2O
increments of 5 cmH_2O

FiO_2 Support

System Managed
Externally Controlled
21% to 100%

Pressure Supported Breaths

(SIMV & PSV modes)

Support Pressure (PS)

5 cmH_2O to 35 cmH_2O in increments of 5 cmH_2O

Support Pressure Termination (TPS)

Flow-dependent

Terminate when flow falls to 10%, 20%, 30%, 40%, 50% or 60% of peak flow

Time dependent

Terminate after 1.0 to 2.5 secs in increments of 0.5 secs

Both ACV and SIMV modes

- A must for patient comfort
- Synchronize Mandatory breaths with Spontaneous breaths
- Prevent breath stacking

Breath Synchronization

FiO_2 Settings

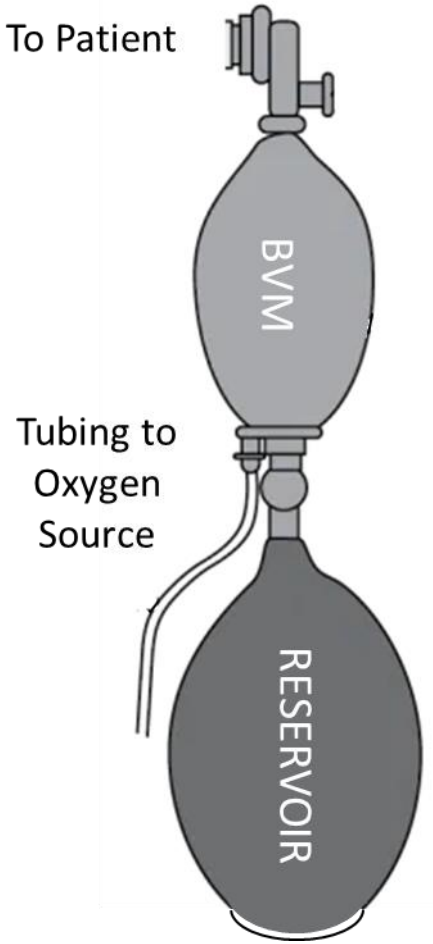
Without the Reservoir bag, FiO_2 delivered is the Atmospheric O_2 content at site

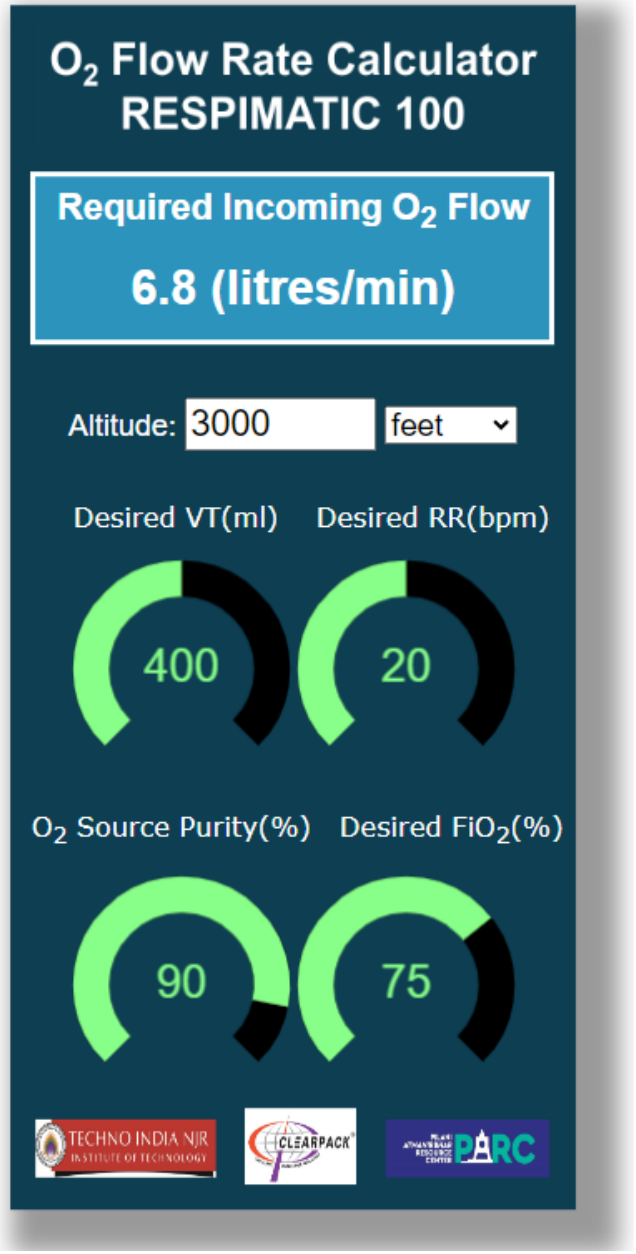
FiO_2 delivery with the Reservoir bag is mathematically modelled, calibrated and verified in the Lab to provide +/- 5% accuracy

Front-panel guides the user in setting the appropriate input O_2 flow rate from the O_2 source for a given FiO_2

The mathematical model provides for a possible O_2 concentrator as an O_2 source (purity < 100%)

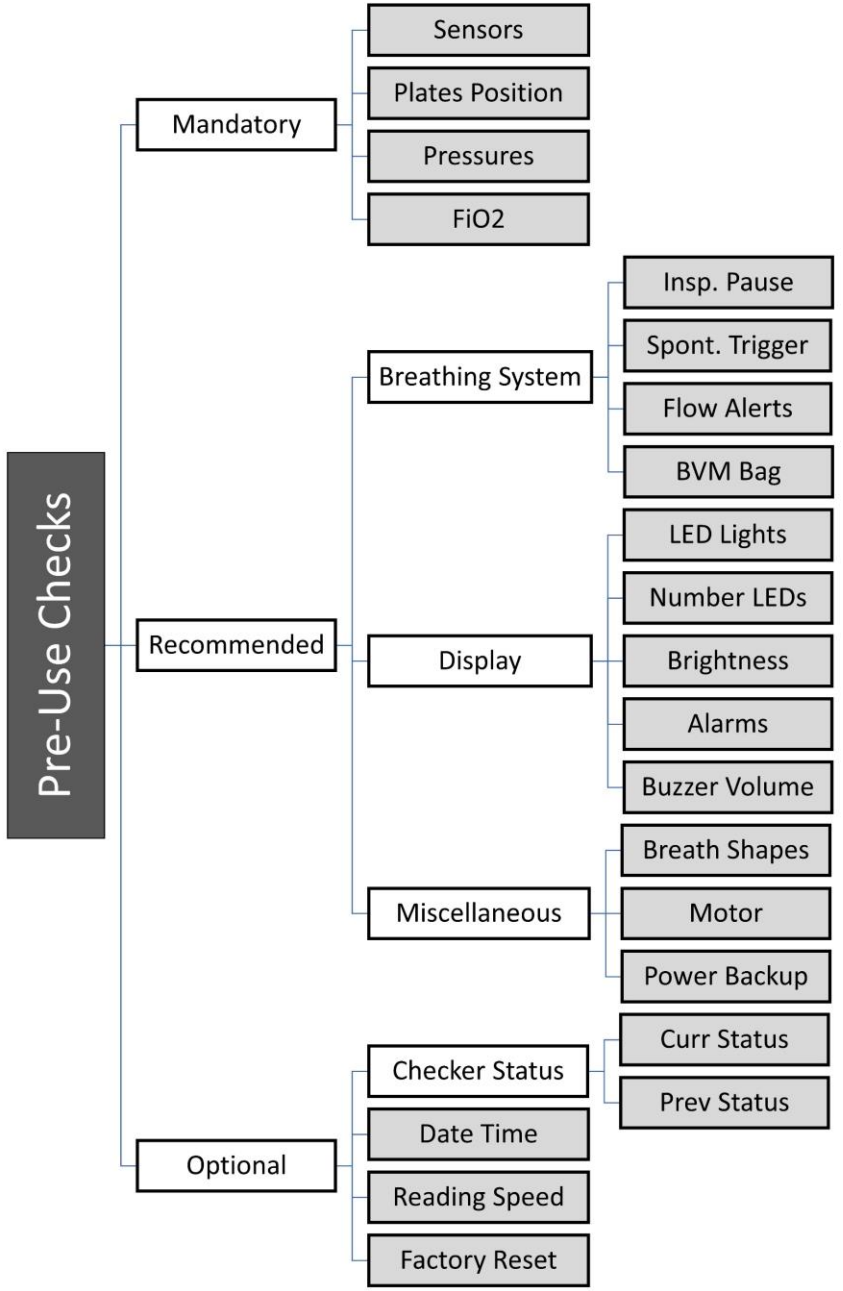
Online Web-accessible FiO_2 calculator is also provided for exploration purposes





Alarms and Safety Features

- **Enforcement of Pre-use checks**
- **Alarms, Warnings and Notifications**
- **Maintenance Breaths till Alarm situation rectified**
  - Max Pressure Alarm
  - Pressure Loss Alarm
  - System Temperature Alarm
  - Sensor failure Alarm
  - Breathing Circuit Failure Alarm
  - Detect coughing/hiccuping fits
  - Inconsistent input parameters
  - And many more …



Thank you
